

KEEPING YOU SAFE

EcoStar Face Shields for Personal Protection

ECOSTAR FACE SHIELDS

EcoStar face shields are personal protective equipment used to protect the facial area from splashes, sprays, and spatter of body fluids. The shield acts as an additional layer of defense for healthcare professionals, effectively creating a solid barrier. While the shield is designed to be worn with facemask and goggles, it also acts as an effective barrier for anyone having to work with the public. See CDC guidelines for use of face shield as the singular form of face covering.

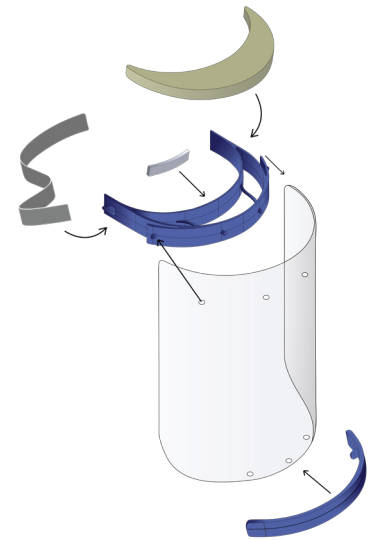

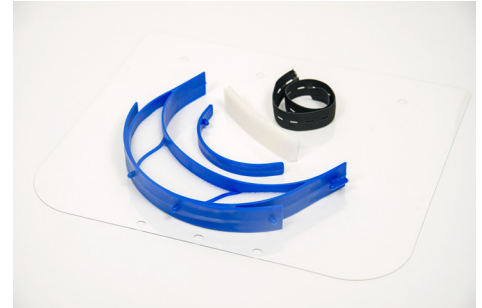

FEATURES & SPECS

Features & Benefits

- For medical, industrial and occupational use
