

Copper Metalwork

EcoStar recommends the use of high-quality stainless steel or copper for metal roof materials. Often ridge caps or cupolas are made from copper. Standing seam copper roofs may also be incorporated into a roof design.

Copper will patina and water runoff from copper will carry some of this natural corrosion with it. Where runoff from copper metalwork meets most types of roofing materials including EcoStar tiles, staining may occur. Please refer to the [EcoStar Maintenance Instructions](#).

EcoStar does not manufacture, sell, or warranty metal roof materials. Any metal materials that the installing contractor decides to use will not void the EcoStar warranty. EcoStar is not responsible for leaks caused by the installation of metal roof materials. Please contact EcoStar's Technical Department with any questions.
